

AI MEETING ASSISTANT • BETA

Meeting Agent

Business Blueprint & Partnership Proposal

By the KOBIS AI Prodigy Team

Market: Sarawak & Malaysia → ASEAN

Purpose: Brief a prospective Key Person / Co-Lead

Status: Built & live

1. The one-liner

Meeting Agent is an AI assistant that joins your Zoom and Google Meet calls, transcribes everything in real time, and delivers a clean summary with action items — in English, Bahasa Malaysia, Chinese, and Iban, with your data kept in Malaysia.

It is the first AI meeting assistant built for the Malaysian market, not a foreign tool forced to fit it.

2. The problem

Every organisation runs on meetings, and meetings leak value:

- People half-listen because they are busy taking notes.
- Decisions and action items get lost the moment the call ends.
- Minutes are written by hand, hours later, often inaccurately.
- Multilingual teams (very common in Sarawak) mix languages in one meeting, and no foreign tool handles that well.
- Government bodies and GLCs cannot use foreign cloud tools at all, because their data is not allowed to leave the country.

The global tools (Otter, Fireflies, Fathom) solve this for English-only, cloud-only, credit-card customers. They do not solve the Malaysian reality.

3. The product

- 1 **You paste a meeting link.** Zoom, Google Meet, or Teams.
- 2 **An AI agent joins the call** as a participant and records + transcribes live.
- 3 **It writes the notes for you** — summary, highlights, and a checklist of action items with owners.
- 4 **Everything is searchable and exportable**, organised by meeting, in your language.

Built-in from day one: real-time transcription with speaker ID, AI summaries & action items, **four languages (English, BM, Chinese, Iban)**, dashboard, meeting history, profiles, subscriptions, admin, and PDF/text export.

Live demo: Landing (current) — meetingclone-kobis.netlify.app • Landing (new design) — meetingagent-v2.netlify.app

4. Why now

- AI meeting assistants are one of the fastest-growing software categories; a bot in every call is now normal.
- Malaysia is mid-way through a mandatory digital push: e-invoicing (MyInvois/LHDN), SME digitalisation grants, and aggressive state digital agendas — especially Sarawak via SDEC.
- Hybrid and online meetings are now permanent.
- No serious local competitor owns the multilingual + data-sovereign niche. The window is open now.

5. The unfair advantage (our moat)

- 1 **Language.** We speak Bahasa Malaysia and **Iban** — no global competitor markets in BM, and none support Iban. A genuine, defensible local moat.
- 2 **Data sovereignty.** We deploy on a customer's own server (on-premise / private cloud). Government & GLC data must stay in-country; Otter and Fireflies cannot offer this. It unlocks the most valuable buyers.
- 3 **Local commercial fit.** We bill how Malaysian businesses actually pay — bank transfer, FPX/DuitNow, purchase orders, LHDN-compliant invoices.
- 4 **Grant alignment.** Positioned to be claimable under SME digitalisation grants — removing the price objection for SMEs.

6. Market & opportunity

Primary market: Sarawak, then all of Malaysia. Buyer segments, by value:

- **Government agencies & statutory bodies** (via SDEC) — high value, data-sovereignty driven.
- **GLCs** (e.g. Sarawak Energy, Petros) — large seat counts, annual contracts.
- **Professional firms** — law, audit, accounting, consulting. Meetings ARE their billable work.
- **Universities** — UNIMAS, Curtin, Swinburne, i-CATS.
- **SMEs & chambers** (e.g. SCCC) — grant-funded, high volume, referral-driven.

The same product serves a RM 59/month freelancer and a RM 100,000/year government deployment. That range is the opportunity.

7. Business model & pricing

Tier	Price	Who it is for
Free	RM 0 — 3 meetings/month	Trial, lead generation
Pro	RM 59/month (or RM 590/year)	Individuals, consultants
Team	RM 49/seat/month (min 5 seats)	SMEs, firms, departments
Pay-per-use	RM 12/meeting	Occasional users
Enterprise / White-label	Custom, from ~RM 30k/year	Government, GLC, corporates

The revenue engine is **Team (per-seat)** and **Enterprise (white-label & on-premise)**. Individual subscriptions build the brand and funnel; corporate contracts pay the bills.

8. The corporate & white-label play

- 1 **Team / volume licence** — per-seat, annual, SSO, onboarding & training. Indicative RM 30k–80k/year for 50–200 staff.
- 2 **White-label** — hosted under their brand & domain (e.g. meetings.theircompany.com.my). Setup from RM 25k + annual licence. For agencies & resellers.
- 3 **On-premise / private cloud** — on the customer's own servers; data never leaves their walls. Setup from RM 40k + annual support retainer. The offering for government & GLCs.

Sales flow: demo request → discovery call → 30-day pilot in one department → quotation / purchase order → deployment + training → ongoing support retainer.

9. Government & grant alignment

"Meeting Agent is aligned with Malaysia's digital economy agenda — built for data sovereignty, ready for LHDN e-invoicing, and claimable under SME digitalisation grant initiatives. We deploy it as in-house, white-label software that keeps national data on national soil."

On the website, a dedicated **"For Government & Enterprise"** section states clearly: *want Meeting Agent as your own in-house or white-label system? Talk to us — we deploy on your servers, support grant claims, and meet Malaysian compliance requirements.* This signals to institutional visitors that the product sits on the right side of policy.

10. Go-to-market plan

- 1 **Land the multilingual story** — "the only AI meeting assistant that speaks BM and Iban and keeps your data in Malaysia."
- 2 **Become a grant-claimable provider** — SMEs buy with grant money; biggest objection removed.
- 3 **Pilot-led enterprise sales** — free 30-day pilots; let results sell the contract.
- 4 **Channel partnerships** — SDEC, chambers, the grant ecosystem.
- 5 **Register for procurement** — ePerolehan (federal) and Sarawak state vendor lists.

11. Where we are today

- Full product **built and deployed** — landing, dashboard, meeting flow, transcripts, AI notes, subscriptions, admin.
- Two live demo sites; four-language interface working.
- Commercial strategy defined.
- **Next:** connect the live meeting-bot backend (Vexa), wire AI (Claude), launch billing, open enterprise pilots.

12. The technology

- Modern, fast web app (React + TypeScript), professional UI.
- Meeting-bot layer via **Vexa** (open-source, self-hostable) — what makes on-premise & white-label possible.
- AI summaries via leading LLMs.
- Runs as our hosted cloud service or on a customer's own infrastructure.

The architecture was chosen so the same codebase serves a RM 59 subscriber and an on-premise government deployment.

13. Illustrative unit economics

Illustrative, to show the shape of the business — not audited figures.

- A **Team** customer of 20 seats at RM 49/seat/month ≈ **RM 11,760/year**.
- An **on-premise government deployment** ≈ **RM 40k setup + RM 60k–100k/year** support & licence.
- Variable cost per meeting (bot compute + AI) is a few sen to a few ringgit, kept low by self-hosting the bot layer — which is why "unlimited" moves to fair-use to protect margins.

A handful of enterprise contracts changes the entire picture. That is the prize.

14. The role: the Key Person we are looking for

We already have a key person driving the website side. **Meeting Agent needs its own owner** — a partner, not an employee.

What you would own

- The growth and commercial success of Meeting Agent, end to end.
- Enterprise & government relationships (white-label and on-premise deals).
- Go-to-market: partnerships, grants, pilots, and channel.

Who fits

- Commercial drive and local network — comfortable in front of government, GLC, and corporate buyers in Sarawak/Malaysia.
- Bonus: sales, partnerships, public-sector procurement, or product experience.
- Most important: someone who sees the same opportunity and wants ownership of it.

Why join now

- The product is already built and live — not a blank page.
- The market window (AI meetings + Malaysian digital push) is open now.
- The moat is real and local — not a "me-too" app.
- Early enough to be a true partner in something with national-scale potential.

The offer: [partnership / equity / revenue-share terms — to be discussed].

15. The first 90 days

- 1 Connect the live backend and ship billing.
- 2 Become a grant-claimable provider.
- 3 Run 3 enterprise pilots (target: 1 government/GLC, 2 firms).
- 4 Sign the first paying Team customer.
- 5 Close the first white-label or on-premise letter of intent.

16. The ask

Read this, see the product live, and let's talk about you taking Meeting Agent as your own.

The market is ready. The product is built. We need the right person to lead it.
